YES NO It is intended that the building described above will be constructed in compliance with the community's flood plain ordinance. The certifier may rely on community records. The lowest floor (including basement) will be at an elevation of 5.0 feet NGVD. Failure to construct the building at this elevation may place the building in violation of the community's flood plain management ordinance.

YES NO The building described above has been constructed in compliance with the community's flood plain management ordinance based on elevation data and visual inspection or other reasonable means.
 YES NO If NO is checked, attach copy of variance issued by the community.

YES NO The mobile home located at the address described above has been tied down (anchored) in compliance with the community's flood plain management ordinance, or in compliance with the NFIP Specifications.

SECTION II ELEVATION CERTIFICATION (Certified by a Local Community Permit Official or a Registered Professional Engineer, Architect, or Surveyor.)

FIRM ZONE A1-A30: I certify that the building at the property location described above has the lowest floor (including basement) at an elevation of 5.51 feet NGVD (mean sea level) and the average grade at the building site is at an elevation of 5.0 feet NGVD.

FIRM ZONES V, VI-V30: I certify that the building at the property location described above has the bottom of the lowest floor beam at an elevation of _____ feet NGVD (mean sea level), and the average grade at the building site is at an elevation of _____ feet NGVD.

FIRM ZONES A, A99, A0, A11, and EMERGENCY PROGRAM: I certify that the building at the property location described above has the lowest floor, elevation of _____ feet NGVD. The elevation of the highest adjacent grade next to the building is _____ feet NGVD.

SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect)

I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is watertight, with walls substantially impervious to the passage of water and structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures, velocities, impact and uplift forces associated with the base flood.

YES NO In the event of flooding, will this degree of floodproofing be achieved with human intervention? (Human intervention means that water will enter the building when floods up to the base flood level occur unless measures are taken prior to the flood to prevent entry of water (e.g., bolting metal shields over doors and windows).)

YES NO Will the building be occupied as a residence?

If the answer to both questions is YES, the floodproofing cannot be credited for rating purposes and the actual lowest floor must be completed and certified in-kind. Complete both the elevation and floodproofing certificates.

FIRM ZONES A, A1-A30, VI-V30, A0 and A11: Certified floodproofed Elevation is 5.51 feet NGVD.

THIS CERTIFICATION IS FOR I) SECTION I ; U) BOTH SECTIONS II AND III (Check One)
